

The NAITRE ET DEVENIR network

... Overview

Information and dialogue with parents
Systematic screening for medical and sensory diseases
Early identification of learning disabilities in schools
Through your participation in this network, we will be able to collect anonymous epidemiological data on the fate of the monitored children, which will contribute to progress in the care of children born preterm

... Key figures

About **15 inclusions** per month
Twins (or more) account for **one third** of children in the network
End of follow-up at **7-years-old**

Are you looking for information, a primary professional, or do you have questions?

About us

The Alpes-Isère Perinatal Network has established a city-hospital network to provide medical follow-up for preterm and vulnerable newborns, from the time they leave the neonatal unit until the age of 7: Naître et Devenir

CITY/HOSPITAL NETWORK:

Paediatricians in the neonatology departments and the Kangourou Unit (Grenoble University Hospital, Belledonne Clinic, Voiron Hospital) collaborate with city practitioners to **provide follow up care for babies who were born preterm, babies who have presented difficulties at birth, or who have complex congenital heart disease.** Practitioners join the network if they want to take part in the follow up process. All the participating doctors receive special training and work together on the children's files, which they monitor in pairs.

THE ROLE OF THE NETWORK:

Our goal is to offer **follow up** care that is **tailored** to your child's development, to propose screening at "key" ages and, if necessary, to direct check up and treatment..

WHY BECOME A MEMBER?

Joining the Naître et Devenir network makes it possible to **receive consistent care** from professionals who are committed to you and your child, after leaving the neonatal unit. They will be able to reassure you and refer you to appropriate care, if necessary (e.g. physiotherapy, speech therapy, centres for early sociomedical care, etc.).

The network is presented to you during your child's hospitalisation: you provide consent by signing the membership form.

From
neonatology
until
7 years old

Free of
charge!

Admission criteria :

Group 1: all children born ≤ 32 weeks' gestation + 6 days

Group 2: all children born between 33 and 34 weeks' gestation + 6 days

Group 3: all full term children having presented difficulties at birth:

- hospitalised at birth for anoxic ischemic encephalopathy
- born with complex congenital heart disease

The Naître et Devenir network takes care of children born at the Grenoble University Hospital, the Belledonne Clinic and the Voiron University Hospital or born in other maternity hospitals but living in Isère.

Organisation of follow-up :

Only designated doctors will have access to your child's computerised file on a secure health platform: GCS Sara.

The schedule for follow up visits: dual expertise

- A lead private practitioner: paediatrician, maternal and infant health doctor or general practitioner chosen by the parents from the list of doctors who are part of the network
- A lead hospital based paediatrician

Consultations are also scheduled with:

A **psychologist**: at your child's 6th month (free review about going home, baby's rhythm, etc.) and at the child's 2nd birthday (developmental screening).

A **neuropsychologist**: upon referral by the medical team monitoring the child.

The psychologists and the neuropsychologist observe the breadth and depth of the stages of the child's development:

- Gross motor skills: sitting, walking, etc.
- Fine motor skills: manipulating objects, games, drawing, etc.
- Language, communication, interaction
- Integration into school and learning

Some tips :

- Anticipate booking appointments with private or hospital practitioners
- Inform the office when booking the appointment that it is a Naître et Devenir consultation
- Communicate scheduled appointments to the coordination team by email or telephone
- From the age of 4 onwards, please bring the teachers' questionnaire which will be sent to you at each annual reminder in order to complement the medical assessment

“The coordination unit of the Naître et Devenir network is open to input from parents and the various healthcare professionals in order to organise the extended follow-up as efficiently as possible!”
